

Scenario Outline: A user with multiple invalid credentials must get an error message while logging in
And he enters an invalid email address "<emailId>" in the Email text-box
And he clicks on Continue button
Then he must see the error message - "We cannot find an account with that email address"

```
@When("he enters an invalid email address {string} in the Email text-box")
public void he_enters_an_invalid_email_address_in_the_email_text_box(String
string) {
    signin.inputUsername(string);
}
```
