# Steps to do the project:

1) Create a DB - ecommerce.
2) Inside this DB, create a table - 'products'.
3) Inside the 'products' table, create following 5 columns -
   s_no, product_name, product_price, manufacturing_year, product_type
4) Insert 10 different rows in the table, make 3 rows of similar product type and another 4 rows of similar product type.
5) Fetch the information from the DB and count how many products are of similar type.
